

## First Equine Peak Performance Wellness Plan

First Equine Veterinary Services is proud to offer the Peak Performance Wellness Plan. This goal of this wellness plan is to offer the best in preventative medicine at an affordable price. We take the burden of equine healthcare off your shoulders and provide the latest in equine preventative medicine. By having an experienced veterinarian perform a biannual wellness exam many diseases can be diagnosed early on and can extend the life of your equine companion. On a wellness visit a veterinarian will completely examine your horse including ophthalmic exam, cardiac exam, thoracic auscultation, hoof assessment, and nutritional consultation. In addition, vaccines will be given and a dental float will be performed annually. A custom deworming strategy will be developed based on a fecal egg count. At First Equine we pride ourselves on lameness evaluation and hope to bring this expertise to your farm. A lameness screening will be performed as part of the wellness plan including full limb flexions and a full soundness exam. By taking part in the Peak Performance Wellness Plan you will be saving 20% and will receive an additional 50% of an after hours emergency call.

### Wellness Plan Example
